

Bringing stable, reliable business intelligence solutions to market faster

actionable information you need to make your business operate more efficiently. A reliable and expandable BI platform from Neudesic will put you in complete control of your

Make Intelligent Investments

It doesn't take an army of technicians installing expensive software you don't have on a room full of hardware you don't need to build an effective business intelligence solution. As a Microsoft National Systems Integrator and Gold Business Intelligence Partner, Neudesic maximizes your return on investment by leveraging extensive knowledge of Microsoft's BI technology, including the latest versions of SQL Server and SharePoint Server, to deliver custom BI solutions that seamlessly integrate with your existing Microsoft software and systems.

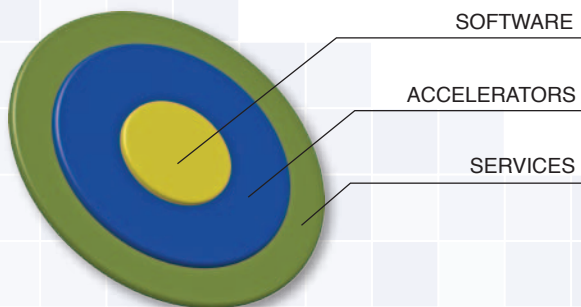

Take Control of Your Data

Neudesic's experienced team of BI professionals will tailor a solution to your unique business needs and implement it quickly and efficiently, so you can get started turning the mounds of data your company generates daily into the

business data by quickly pulling together all the information from your ERM, CRM, ERP, POS, inventory management, HR and payroll systems and delivering it to you in meaningful and intelligent ways so you can make more informed and timely business decisions.

What Neudesic Accelerators Do

Neudesic accelerators bring software and services together to speed up the solution development process.

Get Quality Solutions Quickly

Applying industry best practices, comprehensive Quality Assurance guidelines and rigorous testing, Neudesic has established itself as a leading provider of innovative BI solutions that span a wide range of key industries, including financial, medical, mortgage, banking, manufacturing, and professional services. We leverage our success by reusing proven code to build custom frameworks that accelerate the delivery of your BI solution while maintaining the highest level of system quality and stability.

Advantages of Neudesic Frameworks

Neudesic frameworks can be combined to meet your specific enterprise data warehouse needs.

ETL Framework

Accelerates data warehouse builds by 30%-40%, providing prebuilt templates that use best practices, such as storing source and target counts for later system audits.

SSRS Framework

Stores report branding meta data standard(s) in database tables and is used to build and standardize common elements of all reports.

Crystal Reports Conversion Process

Easily handle large amounts of Crystal Reports, automatically converting roughly 80% of the code.

Master Data Services Framework

Model builder that speeds MDS development and deployment.

SSAS Auto Partitioning Framework

Daily manages partitions within SSAS cubes automatically.

Performance Tuning Framework

Graphically displays areas where system performance can be improved after a database or cubes profiler session is performed. Can be used on OLTP or OLAP systems.

Administration Portal

Surfaces BI framework meta data reports in one location for easy BI system management, from surfacing web pages within MDS to managing errors within ETL.

Neudesic Accelerators in Action

Colorado Bankers Life Report Rebranding

After Dearborn National acquired CBL, more than 100 reports needed to be rebranded, which included updating tables, "Report Help", confidentiality and copyright statements, colors, logos, etc. With Neudesic's SSRS Framework in place, it took only 13 minutes to complete the process, and most of that time was spent getting the correct authority on the production server to edit the configuration tables and upload the new images.

Ball Aerospace Enterprise Data Warehouse

Neudesic developed an enterprise data warehouse for Ball Aerospace that integrated financial information from multiple instances of Costpoint. By leveraging its ETL Accelerator with SQL Server Integration Services, Neudesic established a standard for ETL processing that would load data from source systems into the data warehouse. Using its proven methodologies and accelerators, Neudesic provided a robust reporting platform that is highly supportable and extensible for Ball's future development needs.

Harry & David's BI Reporting System

Neudesic built a SharePoint site to host Harry & David's Business Intelligence Tools. Neudesic's solution provided Data Analysis ETL jobs, Table Views, Dimensions, Cubes and Calculations to support a comprehensive new reporting process that gives users the power to access, analyze and manipulate important data, and generate reports that will play key roles in management's daily decision making process.
