

Building AI in Teams to Simplify the Modern Workplace

Integrate business systems, extract insights, and drive intelligent automation and collaboration

Neudesic leverages the power of artificial intelligence and the Azure platform to expand team productivity and unify business systems within the Microsoft Teams platform.

Our AI Accelerators enable broader MS Teams adoptions by:

Automating workflows through natural language integrations

Providing self-service support through intelligent chatbots

Extracting insights through integrated knowledge mining engines

Unifying line of business integration through MS Teams apps

Sample Use Cases Include:

- Receiving approval signatures for a document from within a team conversation
- Automatically documenting next steps from conference calls
- Self-service IT resolution and HR employee support utilizing chatbots
- Automatic document creation from corporate knowledge shares
